

# level1\_cub.py documentation

Script to transform all PDS3 files in a particular directory into level 1 ISIS cubes through the ISIS's tool 'dawnvir2isis'

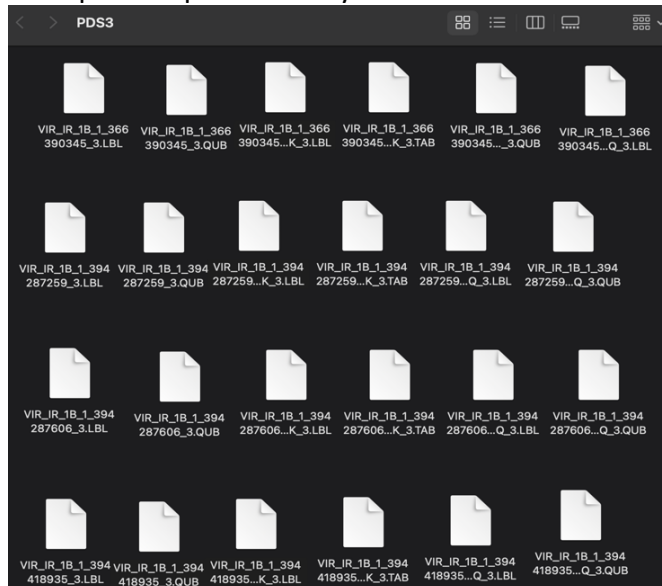

It will take 2 parameters:

The first parameter 'input\_dic' must be the path to the directory in which the PDS3 files are

The second parameter 'output\_dic' must be the path to the directory in which you want to save the cubes

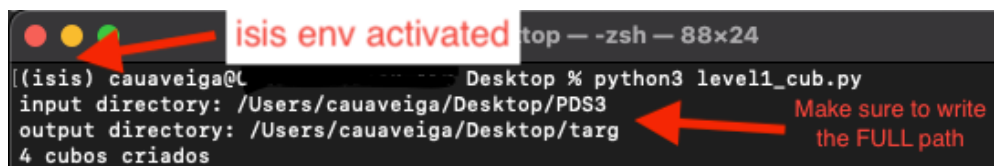

The cubes will be made in the order that the files currently are.

Example of input directory:

Testing the script in the above directory:

In order to the script to work you must make sure that your isis conda environment is activate!

Output:
